NITRILE

POWDER FREE
EXAMINATION
GLOVES

*Performance in **Black**,
Nitrile **Excellence***

Series No.:
20530 Black Nitrile Powder Free Examination Gloves

BENEFITS OF BLACK NITRILE POWDER FREE GLOVES

Unleash the Power of Style and Performance

Are you ready to make a bold statement in hand protection? Look no further! ASAP **Black** Nitrile Powder Free Examination Gloves combine sleek style with uncompromising performance to meet your professional needs. Step into the world of elegance and reliability with these exceptional gloves.

Unparalleled Strength and Versatility

ASAP **Black** Nitrile Powder Free Examination Gloves are designed to provide superior strength and durability. Crafted from premium nitrile material, these gloves offer excellent resistance against chemicals, punctures, and tears. Whether you're working in a healthcare facility, automotive industry, or other demanding environments, these gloves can handle the toughest tasks with ease.

Aesthetic Appeal for Various Industries

The sleek **black** colour of these gloves is not just visually appealing; it also serves a practical purpose. In beauty and tattoo industries, **black** gloves are preferred to minimize the visibility of stains, including blood, providing a professional and clean appearance. Additionally, their use extends to a wide range of applications, making them a versatile choice for professionals across industries.

Key Features and Benefits:

Stylish and Professional: The **black** colour adds a touch of sophistication and professionalism to your work environment.

Superior Protection: Nitrile material offers exceptional resistance against chemicals, punctures, and tears.

Enhanced Grip: The finger textured surface provides a secure grip for improved control and precision.

Powder-Free: Eliminates the risk of allergic reactions and reduces the possibility of contamination.

Ambidextrous Design: Fits both hands comfortably, ensuring flexibility and convenience.

Instructions For Use

Description - Nitrile Powder Free Examination Gloves, Non-sterile, Single Use Only.

Intended Use - ASAP nitrile glove is a disposable glove product worn to protect the hand of wearer against mechanical action whose effects are superficial, cleaning materials of weak action and easily reversible effects.

How To Don Gloves - Inspect the gloves to ensure there are no pinholes or tears. If gloves are ambidextrous, they can be worn on either hand. If not, align the glove's fingers and thumb with the proper hand before donning. Insert five fingers into the cuff and pull the cuff over the wrist. Check for a secure fit around the fingers and palm. The cuff should fit snugly around the wrist.

How To Doff Gloves - After use, users should visually check the glove and remove any contamination from the outer surface before removing the gloves from the hands. Grasp the outside edge of the glove near the wrist. Peel the glove away from the hand, turning it inside out. Hold it in the opposite glove hand. Slide an ungloved finger under the wrist of the remaining glove, be careful not to touch the outside of the glove. Peel the remaining glove off from the inside, creating a "bag" containing both gloves. Discard.

Disposal - Properly dispose of all used nitrile glove. Follow your institution's policies for use and disposal of these gloves.

Storage - Store in a dry place. Avoid excessive heat (30°C). Exposed product should be shielded from direct sunlight, intense artificial light, x-ray machines, and other source of ozone.

Shelf Life - Three years from the manufacturing date.

Warning - These gloves are for single and transient use only.

Caution - This information does not reflect the actual duration of protection in the workplace and the differentiation between mixtures and pure chemicals. The chemical resistance has been assessed under laboratory conditions from samples taken from the palm only (except in cases where the glove is equal or over 400mm - where the cuff is also tested) and relates only to the chemical tested.

It can be different if the chemical is used in a mixture. It is recommended to check that the gloves are suitable for the intended use because the conditions at the workplace may differ from the type test depending on the temperature, abrasion, and degradation. When used, protective gloves may provide less resistance to the dangerous chemical due to changes in the physical properties. Movements, snagging, rubbing, degradation caused by the chemical contact etc. may reduce the actual use time significantly.

For corrosive chemicals, degradation can be the most important factor to consider in selection of chemical resistant gloves. This product contains nitrile rubber, which may cause allergic reactions in individuals who are known or suspected to be allergic to nitrile rubber. If an allergic reaction occurs, stop using immediately and consult a physician. This product is not made of natural rubber latex.

EN ISO 374

Chemical Permeation (EN ISO 374-1:2016+A1:2018/Type C)	Level	Mean Degradation % (EN ISO 374-4:2019)	Degradation levels indicate the change in Puncture Resistance of the glove after exposure to the challenge chemical.
K 40% Sodium Hydroxide	5	-17.7	
P 30% Hydrogen Peroxide	0	12.9	
T 37% Formaldehyde	4	-22.7	

EN ISO 374

EN 16523-1:2015+A1:2018 Classification of Permeation Performance Level						
Measured Breakthrough Time (min)	>10	> 30	> 60	> 120	> 240	> 480
Permeation Performance Level	1	2	3	4	5	6

The penetration levels have been assessed under laboratory conditions and relates only to the tested specimen.
